TMI-109

Amendment filed May 22, 2007

Response to Final Office Action mailed January 22, 2007

**AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions and listing of claims in the application.

**LISTING OF CLAIMS:**

1. (Currently Amended) A software installation method for installing software in a user's computer which is customized according to a user's order and is supplied to a user under a built-to-order (BTO) scheme, the method comprising:  
\_\_\_\_\_ storing identification information for identifying a of the user's computer system and system configuration information, associated with the identification information, indicating hardware components of the user's computer system;  
storing software components required for operation of each of the hardware components;  
accepting from the user's computer system the identification information of the user's computer system; and  
sending, to the user's computer system, the software components required for operation of the hardware components of the user's computer system that is are determined from the stored system configuration information associated with the accepted identification information.
2. (Original) The software installation method according to claim 1, further comprising the steps of:

Serial No. 10/004,825

TMI-109

Amendment filed May 22, 2007

Response to Final Office Action mailed January 22, 2007

managing, for an individual user, a fee for the software sent to the user's computer system; and

collecting the fee from the user.

3. (Currently Amended) A ~~software installation method~~ for installing software in a user's computer which is customized according to a user's order and is supplied to a user under a built-to-order (BTO) scheme, the method comprising:

a first database for storing software components required for operation of hardware components of a computer system;

a second database for storing identification information for identifying a computer system supplied to a user, and system configuration information associated with the identification information indicating hardware components of the computer system;

accepting means for accepting from the user's computer system the identification information given to the user's computer system;

first determining means for determining system configuration information which corresponds to the accepted identification information, with reference to the second database;

second determining means for determining the software components required for operation of the hardware components indicated in the system configuration information, with reference to the first database; and

sending means for sending the determined software components to the user's computer system.

Serial No. 10/004,825

TMI-109

Amendment filed May 22, 2007

Response to Final Office Action mailed January 22, 2007

4. (Currently Amended) A ~~software installation method~~ for installing software in a user's computer which is customized according to a user's order and is supplied to a user under a built-to-order (BTO) scheme, the method comprising the steps of:

sending identification information identifying a first computer system to a second computer system;

accepting, in response to the above step, at least one software component required for operation of a hardware component of the first computer system, which is indicated in system configuration information stored in the second computer which corresponds to the identification information sent from the first computer system; and

conducting setup processing in order to make the at least one software component accepted in the accepting step into an executable state in the first computer.

5. (Original) The software installation method according to claim 4, wherein the first computer system reads and executes a specified installation software which is stored in a specified storage medium.

6. (Previously Presented) The software installation method according to claim 5, further comprising a step of storing the at least one software component which the first computer system receives from the second computer system.

Amendment filed May 22, 2007

Response to Final Office Action mailed January 22, 2007

7. (Previously Presented) A storage medium having software stored thereon for making a computer system, which has a memory in which identification information identifying the computer system is stored, execute a function of installing a specified software onto the computer system, wherein,

the software comprises the functions of:

sending the identification information to another computer system;

accepting, following the sending of the identification information, at least one software component required for operating a hardware component of the computer system sent from the another computer system; and

conducting setup processing in order to make the accepted at least one software component into an executable state.

8. (Previously Presented) An installation system for a client/server system comprising a first computer system and a second computer system, by which software is installed onto the first computer system,

wherein the first computer system comprises:

means for storing identification information for identifying the first computer system;

means for connecting the first computer system to the second computer system and for sending the identification information to the second computer system, in accordance with recovery instructions; and

TMI-109

Amendment filed May 22, 2007

Response to Final Office Action mailed January 22, 2007

first accepting means for accepting at least one software component sent from the second computer system, and

wherein the second computer system comprises:

a first database for storing software components required for operation of hardware components of the first computer system;

a second database for storing the identification information for identifying the first computer system, and system configuration information indicating the hardware components of the first computer system;

accepting means for accepting, from the first computer system, the identification information of the first computer system;

first determining means for determining system configuration information which corresponds to the accepted identification information, with reference to the second database;

second determining means for determining the software components required for operation of the hardware components indicated in the system configuration information, with reference to the first database; and

sending means for sending the determined software components to the first computer system.

11. (Currently Amended) A software installation for installing software in a user's computer which is customized according to a user's order and is supplied to a user under a built-to-order (BTO) scheme, the method comprising:

a first database for storing system configuration information indicating hardware components of a user's computer system;

a second database for storing identification information for identifying a computer system of a user and the system configuration information of the user's computer system;

an accepting means for accepting from the user's computer system the identification information given to the user's computer system;

first determining means for determining system configuration information which corresponds to the accepted identification information, with reference to the second database;

second determining means for determining the software components corresponding to the system configuration information based on the identification information of the user's computer system determined with reference to the first database; and

sending means for sending the determined software components to the user's computer system.

Amendment filed May 22, 2007

Response to Final Office Action mailed January 22, 2007

16. (Previously Presented) An installation system for a client/server system constituted by a first computer system and a second computer system, by which software is installed onto the first computer system,
- wherein the first computer system comprises:
- means for storing identification information for identifying the first computer system;
- means for connecting the first computer system to the second computer system and for sending the identification information to the second computer system, in accordance with recovery instructions; and
- first accepting means for accepting software sent from the second computer system,
- and
- wherein the second computer system comprises:
- a first database for storing software components required for operation of hardware components of the first computer system;
- a second database for storing identification information for identifying a computer system supplied to a user, and the system configuration information associated with the identification information indicating hardware components of the first computer system;
- accepting means for accepting, from the first computer system, the identification information of the first computer system;
- first determining means for determining system configuration information which corresponds to the accepted identification information, with reference to the second database;

second determining means for determining the software components required for operation of the hardware components, with reference to the first database; and

sending means for sending the determined software components to the first computer system.

17. (Previously Presented) A software installation method according to claim 1, wherein the software components are device drivers and the hardware components are peripheral devices of the user's computer system.

18. (Previously Presented) A software installation method according to claim 3, wherein the software component is a device driver and the hardware component is a peripheral device of the user's computer system.

19. (Previously Presented) A software installation method according to claim 4, wherein the software component is a device driver and the hardware component is a peripheral device of the first computer system.

20. (Previously Presented) A storage medium according to claim 7, wherein the software component is a device driver and the hardware component is a peripheral device of the computer system.

21. (Previously Presented) An installation system for a client/server system according to claim 8, wherein the software component is a device driver and the hardware component is a peripheral device of the first computer system.
22. (Previously Presented) A software installation method according to claim 11, wherein the software component is a device driver of a peripheral device of the user's computer system.
23. (Previously Presented) An installation system for a client/server system according to claim 16, wherein the software component is a device driver of a peripheral device of the first computer system.
